

Why choose Ventex for your company?

Ventex has been an industry leader and strong proponent for Electronic Neon Power Supplies over the past ten years.

With the introduction of our "**Generation III**" UL listed power supplies, **Ventex** has become the vendor of choice for a wide range of nationwide sign fabricators.

Both indoor and out-door units are lightweight, compact, and energy efficient. Our clients have indicated using **Ventex** has generated cost savings of 25-30%. These savings benefits can be attributed to decreased labor costs as well as a reduction in cost for sign materials in housing our units. Additionally, due to **Ventex's** High Power Factor design, more units can be installed on the same circuit, in many cases reducing the necessity for supplementary electrical drops.

Ventex also offers a **free** service, which we proudly call, **Value Added Engineering**. Through this service, you can fax us a sketch or layout of a sign and our engineering staff can suggest to you the proper power supply, as well as answer any questions in regard to placement, installation or hook-up. Ventex Electronic power supplies come in 120/240/277 Volts, and are available in 30 or 60 mA versions. **BOTTOM LINE**, choosing **Ventex** will save your business time and money.

Why Choose Ventex for your customers?

When considering illuminated signage, the key factor to be taken into account is brightness. The objective of your customers sign is to attract attention to their business. Your company's goal is to serve your customers by providing them with superior signage. Generally speaking, **The Brighter the Better!**

Ventex's constant current output insures uniform brightness and lumen output, and this is especially noticeable with the various color tubes now available.

The high power factor design for all Ventex units converts to low energy consumption, and can substantially reduce utility costs for your customers. Not only does **Ventex** lower your company's costs, but the savings can be seen by your customers as well!

If you want brighter, cost & energy efficient signage, with service oriented, user friendly technology, then **Ventex** transformers could very well be the answer!
