

Ventex Technology, Inc. Announces Relocation of World Headquarters.

January 8th, 2008 (Jupiter, Florida): *Ventex Technology, the leading manufacturer of electronic neon power supplies for the illuminated sign industry, announces the relocation of their world headquarters from Riviera Beach, Florida, to Jupiter, Florida.*

The move has been mandated by a need for expanded research and development laboratories in addition to the need for upgraded and larger office space. As a result of this move, the office in Florida will be closed Tuesday, January 22nd, and reopening on Monday January 28th, 2008. Incoming calls will be transferred to the Boston office in order to serve clients' needs during the relocation process.

Ventex Technology, in an effort to provide superior customer service to their growing client base, is moving into a new facility which is more than double the size of their current location. Ventex Technology is poised to expand their product offering to include an electronic H.O. fluorescent ballast, available May 2008. The research required to develop additional breakthrough products, combined with a strong desire to provide world class customer service has forced Ventex to seek a larger office and lab space. Additionally, the larger warehouse facilities will facilitate same day shipping service. This move, combined with an expanded product offering has Ventex Technology positioned to maintain their place at the leading edge of the illuminated sign industry.

All contact information for Ventex Technology will remain the same except as highlighted in red below.
